

iTTVis: Interactive Visualization of Table Tennis Data

Yingcai Wu, **Ji Lan**, Xinhuan Shu, Chenyang Ji, Kejian Zhao, Jiachen Wang, and Hui Zhang

Table Tennis is Popular

- **300 million** active participants
- **552 million** television viewers

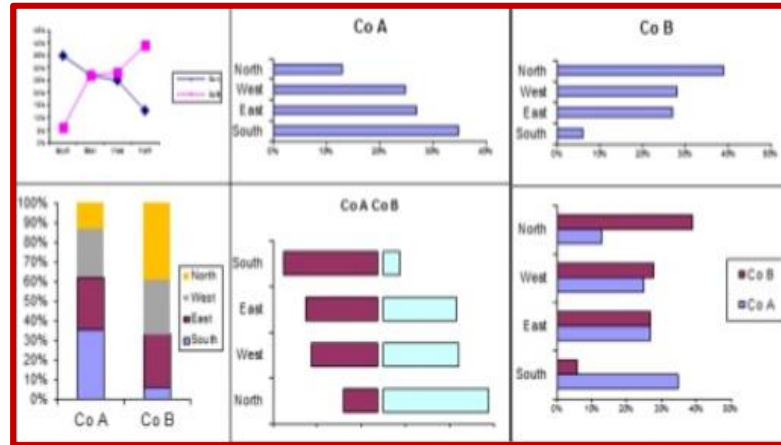

Traditional Analysis Methods VS Visualization

- Traditional analysis methods

Video analysis

Statistic charts

$$\int_{\mathbb{R}_n} T(x) \cdot \frac{\partial}{\partial \theta} f(x, \theta) dx = M \left(T(\xi) \cdot \frac{\partial}{\partial \theta} \ln L(\xi, \theta) \right)$$
$$\int_{\mathbb{R}_n} T(x) \cdot \left(\frac{\partial}{\partial \theta} \ln L(x, \theta) \right) \cdot f(x, \theta) dx = \int_{\mathbb{R}_n} T(x) \cdot \left(\frac{\partial}{\partial \theta} \frac{f(x, \theta)}{f(x, \theta)} \right) \cdot f(x, \theta) dx$$
$$\frac{\partial}{\partial \theta} \ln L(\xi) = \frac{\partial}{\partial \theta} \int_{\mathbb{R}_n} T(x) f(x, \theta) dx = \int_{\mathbb{R}_n} \frac{\partial}{\partial \theta} T(x) f(x, \theta) dx$$

SnapShot

Key Challenges(1/2)

- Difficult to understand and characterize the sophisticated domain problems of analyzing table tennis data

Key Challenges(2/2)

- Difficult to provide a comprehensive and easy-to-understand visual representation of complex table tennis data

Rally

— — — ● Each rally contains a score

.....

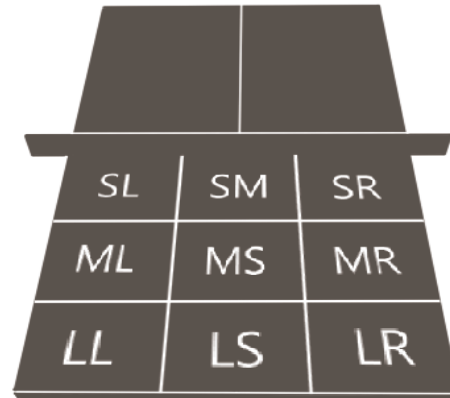

Stroke

— ● Each stroke contains three stroke attributes

Serve, Drop shot
Block, Chop, Loop
Parrel, Quick, Lob
Smash, Cut, Flick

Stroke technique

Stroke placement

Stroke position

Domain Requirements

► Time-oriented analysis of an entire table tennis match

- *How do the scores evolve over time through a match ?*
- *How can analysts navigate into key rallies on the match timeline and examine the details ?*

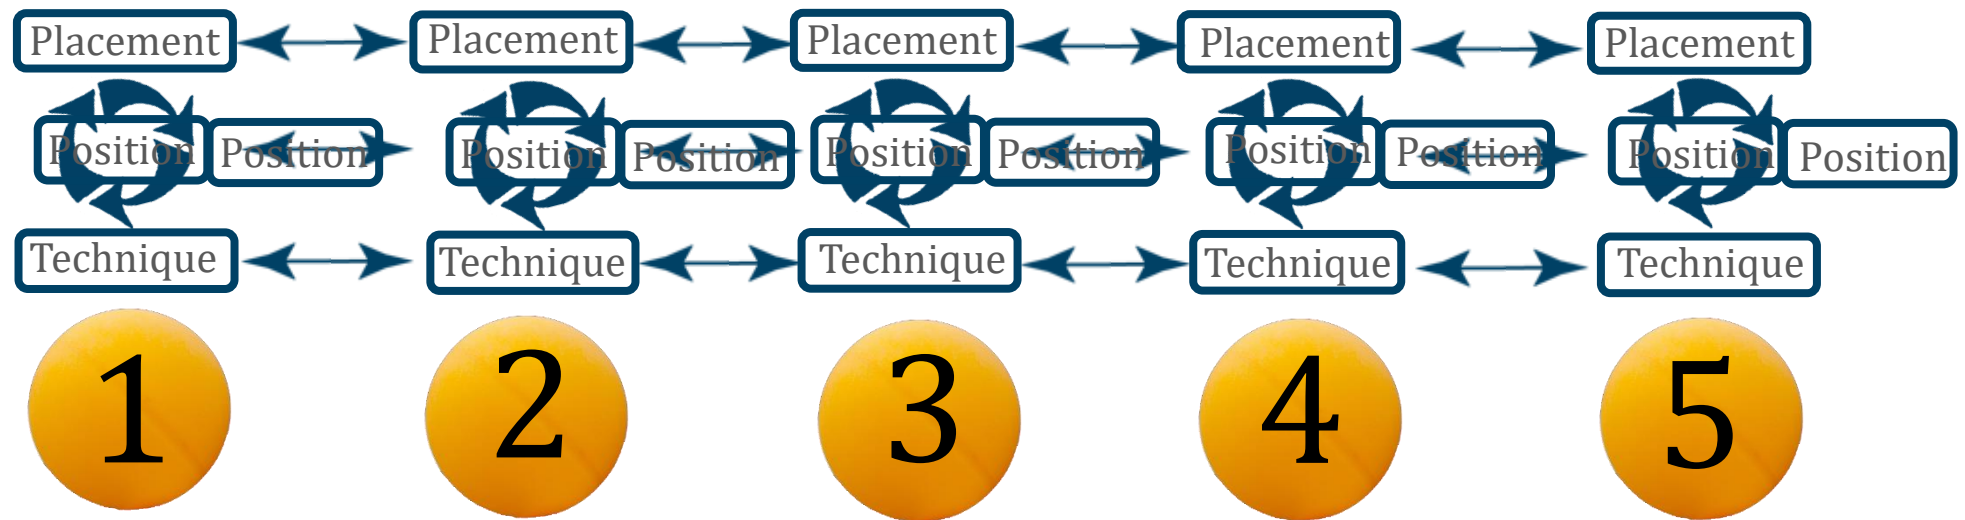

key rallies

Domain Requirements

➤ Statistical analysis of three essential attributes

- How do stroke attributes ***intra-relate*** within a stroke?
- How do stroke attributes ***inter-relate*** between adjacent strokes?

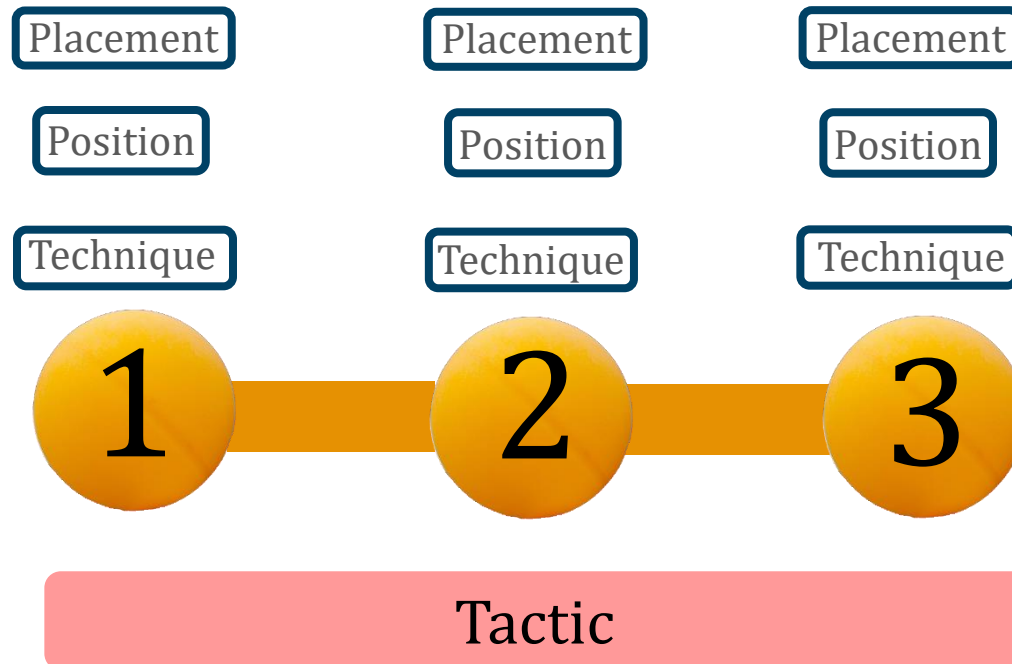

Stroke Sequence

Domain Requirements

Pattern mining of tactics in table tennis matches

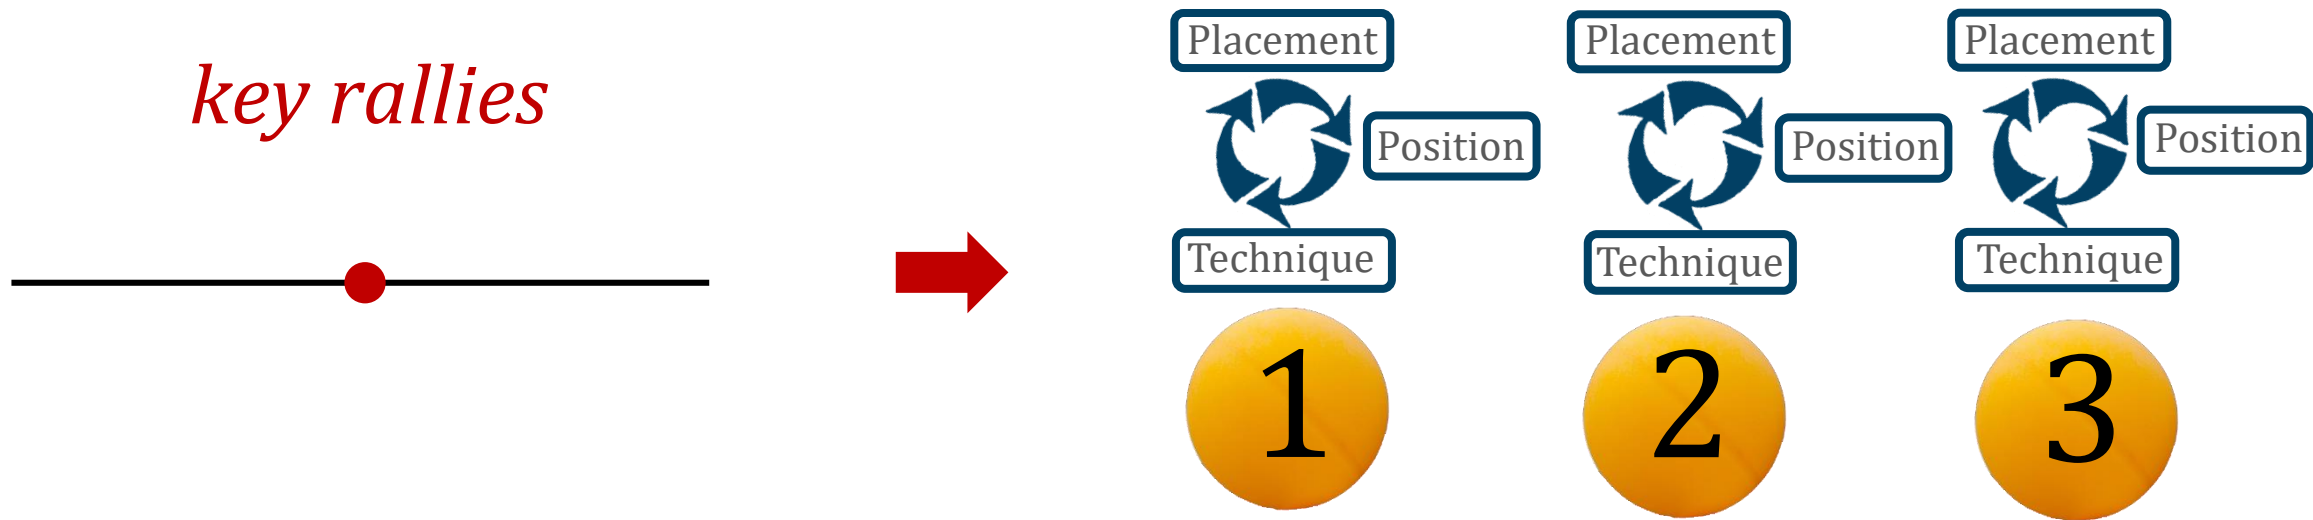

- *What are the frequent patterns of tactics?*
- *What are the scoring rates of tactics?*

Domain Requirements

► Cross-analysis between the timeline and statistics

- *How do the timeline and statistics relate to each other ?*

User Feedback

Advantages

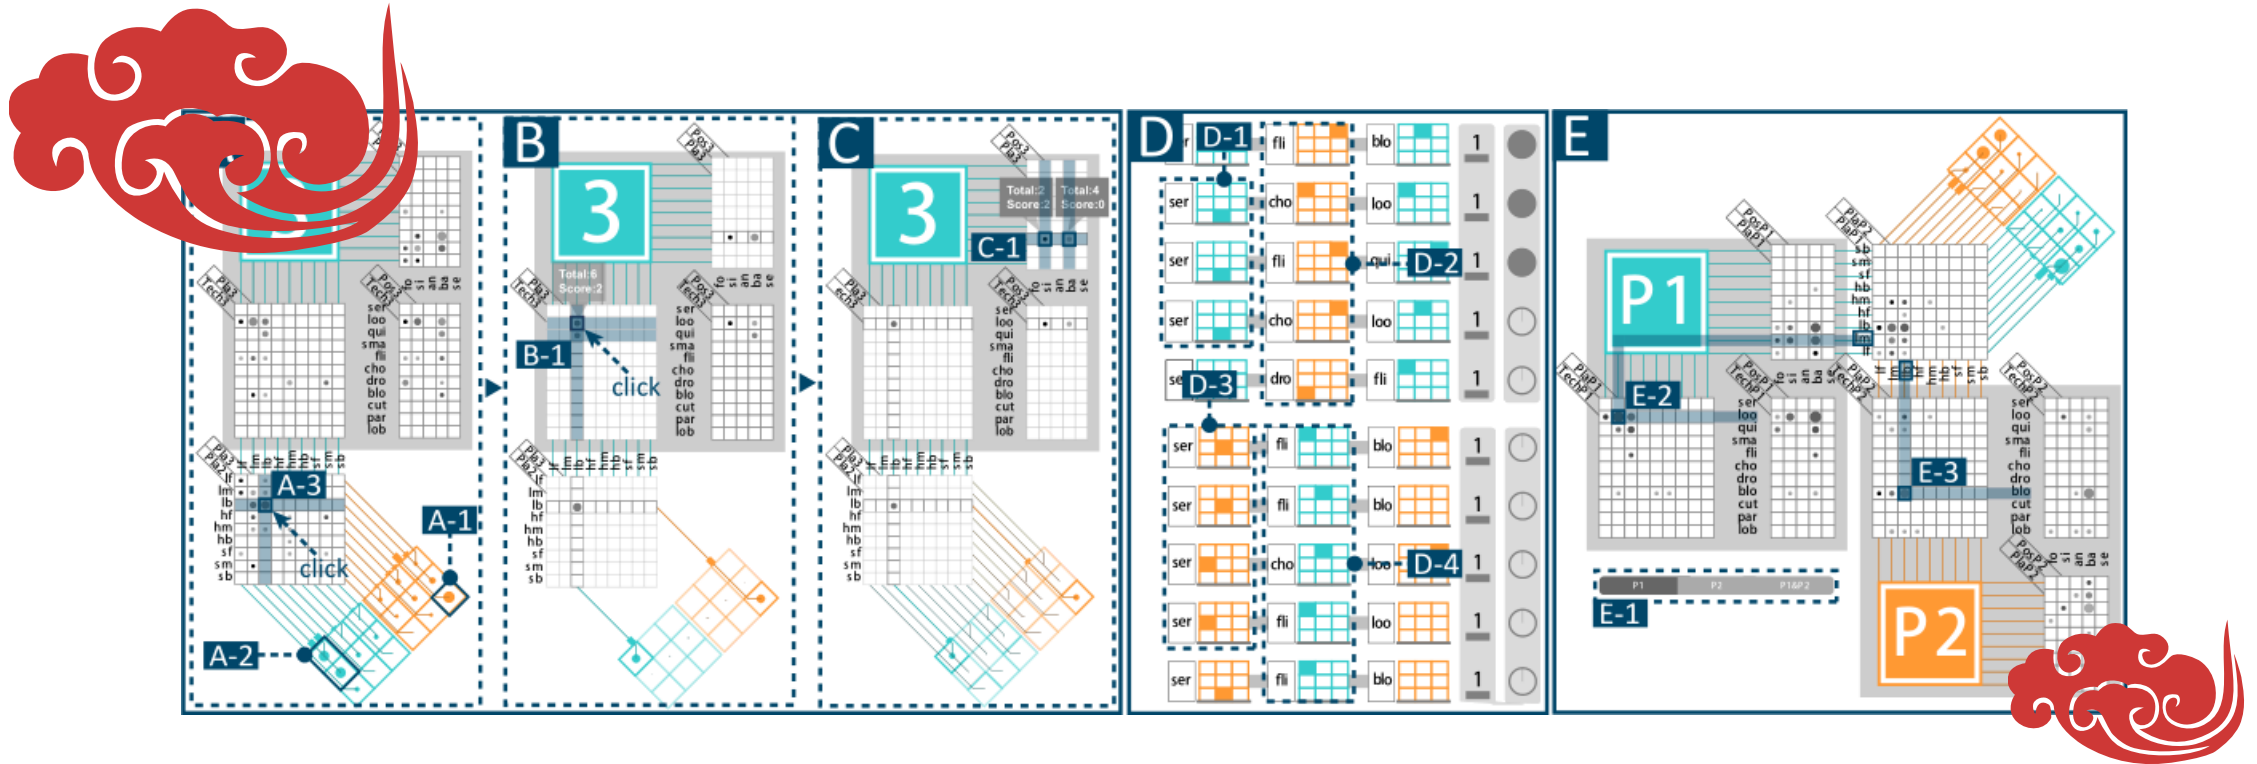

- Employing matrices to represent the correlations
- Supporting flexible cross-view filtering and selections
- Designing icons and glyphs to enhance the intuitiveness

Suggestions

- Integrating prediction and supporting table tennis doubles

Conclusion

- Problem characterizing
- New insights
- A heuristic design

Future Work

Support comparison of multiple matches

Allow prediction of the winning rate
